

Legacies: A Vision of Hope

Four cornerstones

With four major initiatives, the *Legacies: A Vision of Hope* campaign is affecting every department and every student.

— **SCIENCE:** To build a new science center and renovate the Peale Science Center

— **ENDOWMENT:** To increase the endowment to provide ongoing support for college operations and programs

— **DEVOS FIELDHOUSE:** To help meet spectator facility needs for the college and Holland

— **MARTHA MILLER CENTER FOR GLOBAL COMMUNICATION:** To build a new academic building for multiple departments

More about each initiative can be found in the remainder of this four-page campaign supplement.

The Science Center

Hope is ranked among the nation's top schools for undergraduate research and creative projects in the *America's Best Colleges* guide published by *U.S. News and World Report*. The building continues Hope's traditional emphasis on research-based learning.

The new building and renovated Peale together more than double the size of Peale alone.

At 30 years old, Peale was desperately in need of updating for Hope to maintain its tradition of excellence in science instruction.

The building houses the departments of:

- biology
- chemistry
- geological and environmental sciences
- nursing
- psychology

The building has been designed to reflect cross-disciplinary connections, preparing graduates for the way that science and scientists work.

Even as fund-raising continues, the science center is already in action. The new building opened in August of 2003, and the renovated building in August of this year. Please see page 20 for highlights from the recent dedication celebration.
